Title: Artificial Intelligence and Multi-Sensor Fusion for Early Sciatica Prediction

Summary: The research integrates Artificial Intelligence, wearable multi-sensor technologies, biomedical signal processing, predictive analytics and clinical decision support systems to enable early risk assessment, continuous monitoring and personalized rehabilitation of sciatic nerve disorders. The work encompasses the design of an AI-based predictive analytics framework using multi-sensor data fusion, an intelligent clinical decision support and rehabilitation recommendation system and a wearable multi-sensor platform for real-time gait, motion and muscle activity analysis. The research focused to improve early diagnosis, reduce disability and support precision healthcare through non-invasive, data-driven intelligent diagnostic technologies.

Ph.D.:

Title: A Nature Inspired Optimization in Gait Analysis Model of Fall Prediction for Physically Challenged People.

Summary: Intelligent footwear utilizing IoT sensors and machine learning algorithms predicts and prevents falls in people with physically challenged people. Sensors collect gait data, analysed in the cloud, where AI models like HMDTW, ANFIS and PTBO assess gait

patterns and predict imminent falls. Timely notifications warn of danger, enabling intervention and safeguarding vulnerable individuals.
